HI

A small word. A new way to learn.

I AM SAM.

I CAN LEARN.

ONE LETTER AT A TIME.

A tiny science lesson

Plants need sunlight and water to grow.
Leaves use light to help make food.
Plants release oxygen into the air.

Try it in Luma Touch

1. In Practice, feel E (dot) and T (dash).
2. Return to Reader. Choose a short passage.
3. Rest a finger on the trackpad, then press Play.
4. Use the Morse sheet to decode each letter.

SUNLIGHT TO FOOD

A scanned-page practice lesson

Green leaves contain chlorophyll.
Plants use sunlight, water and carbon dioxide to make glucose. Oxygen is released.
This process is called photosynthesis.

Check your understanding

What gas do plants release?

Answer: oxygen.
